

Learn about [critical zone networks](#) by joining us for a panel-style live webinar that will inform an upcoming workshop at the 2019 AGU Fall Meeting. The webinar and workshop will focus on how to facilitate cross-site and cross-network knowledge by synthesizing the scientific drivers, properties and processes studied, and instrumentation and modelling approaches used at different international CZ networks ([click here for workshop information](#)).

If you're interested in learning about facilities across networks, interoperable models, and cross-cutting science questions, including societal challenges involved in studying CZ, we encourage you to attend these webinars.

The first of these informational webinars will provide an overview of these critical zone/watershed networks that have been established in many countries, including in the US, France, Germany, and Canada.

Join us
September 27th
8:00—9:00 a.m. PDT

This panel-styled webinar is open to all interested parties. In-person workshop attendance (December 8, 2019) is not necessary for participation in the webinars. Attendees are encouraged to submit questions before the webinar ([link provided upon registration](#)).

The webinar will be hosted on Zoom. Please register to join us by [following this link](#). For videoconference technical questions, contact Melanie Kincaid, mrkincaid@lbl.gov.
